

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| Course Code | Course Title | Credits | Course Description |
|-------------|--|---------|--|
| ACCT 1060 | Principles of Financial Accounting | 3 | This course introduces fundamental principles and concepts of financial accounting, providing students with a comprehensive understanding of the financial reporting process. Topics covered include the accounting cycle, preparation of financial statements, and analysis of financial information. Students will develop the skills necessary to analyze, interpret, and communicate financial information to support decision-making. |
| ACCT 3300 | Financial Analysis and Reporting | 3 | This course provides an in-depth exploration of the theory and practice of financial reporting. Students will develop a sound understanding of the key concepts and decisions that underpin how financial information is measured, recorded, and disclosed in financial statements. Topics covered include revenue recognition, inventory management, long-term assets, liabilities, equity, and cash flow analysis. The course also delves into advanced subjects such as pensions, leases, and income taxes, emphasizing the conceptual framework underlying accounting practices. |
| ACCT 3550 | Introduction to Auditing | 3 | This course introduces the fundamental concepts, standards, and practices of auditing with an emphasis on financial statement audits. Students will learn the auditing process from engagement acceptance through audit reporting, including audit planning, risk assessment, internal control evaluation, evidence collection, sampling, and professional judgment. The course also covers ethical responsibilities, legal liability, and the expanding role of assurance services. |
| ACCT 4252 | Advanced Financial Accounting | 3 | Students are introduced to accounting for capital combinations. The increasing importance of complex topics in financial reporting, including accounting for business combinations, special purpose entities, foreign currency transactions, consolidating foreign subsidiaries, and ethics and policy issues for the profession, is also explored. The course aims to provide students with a deep understanding of these topics and their practical applications in the business environment. |
| ANTH 1105 | Foundations of Biological Anthropology | 3 | This course is a comprehensive exploration of the fascinating field that examines the biological and evolutionary aspects of human beings, providing a solid foundation in the scientific study of human origins, evolution, genetics, and the relationship between biology and culture. Students will gain a deeper understanding of the biological factors that have shaped human diversity, behavior, and adaptation. |
| ANTH 3110 | Visual Anthropology | 3 | This course introduces students to Visual Anthropology, a field that studies visual culture and uses visual media such as photography, film, and video as tools for ethnographic research. Students explore how images represent cultures and how visual media can be used to understand social and cultural life. The course examines the historical development of visual anthropology, key debates about representation and ethics, and the role of ethnographic film and photography. It also explores contemporary developments such as Indigenous media and collaborative visual storytelling. Through discussions, film analysis, and field activities, students will learn to analyze visual materials and create their own visual ethnography projects. |
| ANTH 3681 | Environmental Anthropology | 3 | This course delves into human-environment relationships through environmental anthropology, exploring historical, cultural, and social dimensions. Students analyze indigenous ecological knowledge, resource management practices, and perceptions of nature, addressing contemporary challenges like climate change and biodiversity loss. The course emphasizes interdisciplinary perspectives and fosters critical thinking for navigating complex environmental issues. |
| ARTH 1011 | Exploring the Art of Architecture | 3 | This course conducts an in-depth exploration of the aesthetic, historical, and functional aspects of architecture. It dwells on the relationship between art and architecture and their social and historical contexts. Focuses on the history of the emergence and development of the relationship between design and fine art, visual, formal, functional, and organizational qualities. Through a combination of theoretical study, practical application and design projects, students will develop a comprehensive understanding of architectural principles, styles and the cultural influences that shape the built environment. |
| ARTH 1060 | The History of Art II | 3 | This is an immersive and comprehensive exploration of the history of art, architecture, and intellectual thought from a global perspective, spanning the Early Renaissance to the close of the nineteenth century. This course offers students an in-depth understanding of the evolution of artistic expression, the social and cultural contexts that shaped it, and the interplay between art and broader human history. Through the course, students will embark on a captivating journey through pivotal moments in art and architecture. |

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| | | | |
|-----------|---------------------------------------|---|---|
| ARTH 1114 | African and Latin American Art | 4 | This course provides an in-depth exploration of the artistic traditions of Africa and Latin America from pre-colonial and pre-Columbian periods to contemporary global practices. It examines the diversity of visual cultures across both regions, with particular attention to colonial encounters, diasporic identities, religious syncretism, and socio-political transformations. The course highlights how artists respond to issues of nation-building, globalization, gender, and social justice. Emphasis is placed on cross-cultural dialogues, the legacy of the African diaspora, and the evolving role of museums and cultural heritage in shaping artistic narratives. |
| ARTH 1160 | History of Jazz | 3 | This course provides a general survey of the history of jazz from its beginnings to the present. Students will explore the historical, theoretical, and critical dimensions of jazz, coupled with hands-on experience in the creative process. The curriculum emphasizes a study of the stylistic and historical components of jazz, including an analysis of influential jazz composers and performers. The course places these elements within the broader context of cultural and artistic movements in the world. |
| ARTH 2260 | Introduction to Modern Art | 3 | This course offers an in-depth exploration of the evolution and transformation of artistic expression in the modern era, spanning roughly from the late 19th century to the mid-20th century. Students will engage with various art movements, key artists, and critical concepts that shaped the trajectory of modern art. The curriculum integrates historical context, theoretical frameworks, and critical analysis to foster a deep understanding of the diverse and revolutionary developments in the art world during this period. |
| ARTH 2550 | Introduction to Music Analysis | 3 | This course introduces students to the foundational tools, concepts, and methodologies used in the analysis of Western music from the Medieval period to the present. Students will learn modern and historical notation, examine rhythm, melody, harmony, counterpoint, texture, and form, and apply analytical techniques to a wide range of repertoire. The course culminates in integrative analyses that combine multiple theoretical perspectives. |
| ARTH 2610 | Critical Theories of Contemporary Art | 3 | This course examines contemporary art through major critical and theoretical frameworks that have shaped artistic practice, interpretation, and institutional contexts since the mid-twentieth century. Moving beyond stylistic analysis, the course emphasizes debates around modernism and postmodernism, power, identity, globalization, capitalism, and technology. Students will engage with key texts by art historians, critics, and theorists while analyzing artworks, exhibitions, and institutions to understand how contemporary art both reflects and contests social, political, and cultural conditions. |
| ARTH 3261 | Asian Art and Architecture | 3 | This course provides a comprehensive exploration of the art and architecture of Asia, tracing its development from ancient civilizations to the modern era. Students will study both monumental structures and portable art objects, with a focus on a wide array of media such as painting, ceramics, textiles, and photography. In addition to architectural landmarks, the course emphasizes how different artistic traditions within Asia have interacted with one another and with global influences. By examining the diversity and evolution of these forms, students will gain a deeper understanding of the dynamic and interconnected cultural exchanges that shape Asian art, challenging traditional notions of what constitutes "Asian art". |
| ARTH 3701 | Music History | 3 | This course explores the rich tapestry of European music from the Middle Ages to the present. Delve into the evolution of musical styles, key composers, and the cultural contexts that shaped the sounds of this era. This course offers a fascinating journey through the evolution of musical styles, composers, and cultural influences that have shaped Western music over several centuries. |
| BCHM 4550 | Human Nutrition | 3 | This course is a comprehensive exploration of human nutrition, covering the biological and chemical aspects of nutrients and their impact on human physiology. Topics covered include normal nutrition across the various stages of the life cycle, nutrition in sports, weight management strategies, and the consequences of inadequate nutrition on health. |
| BIOL 1244 | Exploration to General Biology I | 4 | This course provides an introduction to the fundamental principles of biology, emphasizing the structure and function of living organisms, cellular processes, genetics, and evolution. Topics include the chemical and molecular basis of life, cell structure and function, metabolism, heredity, and the mechanisms of evolution. The course integrates scientific inquiry, experimental design, and data analysis to develop a foundational understanding of biological systems. This course is designed for students pursuing life sciences and related fields, preparing them for advanced biological studies. |

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| | | | |
|-----------|--------------------------------------|---|--|
| BIOL 1245 | Exploration to General Biology II | 4 | This course is the second part of a comprehensive introduction to biological sciences, focusing on the diversity of life, ecology, and physiology. It explores the fundamental principles governing organisms, their interactions with the environment, and their evolutionary history. The course examines the structure and function of plants and animals, ecological dynamics, and the impact of human activities on biodiversity and ecosystems. Students will develop analytical and critical thinking skills through lectures, discussions, and laboratory activities, preparing them for advanced studies in biological sciences. |
| BIOL 1410 | Organismal Biology | 4 | BIOL 1410 is an introductory course in organismal biology that explores the diversity of life on Earth, focusing on the structure, function, ecology, and evolution of organisms. How organisms live, survive, and interact within their environments. Through a scientific lens, this course examines the fundamental principles of ecology, genetic variation, inheritance, and evolution, elucidating the processes that have shaped the diversity of life on Earth. With a focus on hands-on learning experiences, students will engage in laboratory sessions to reinforce theoretical concepts and develop practical skills in scientific inquiry. (Laboratory) |
| BIOL 2090 | Ecology | 4 | This course introduces students to the fundamental principles of ecology, including ecological processes, population and community dynamics, energy and nutrient relations, population distribution and abundance, ecological goods and services, nutrient cycling and retention, and more. Students will gain an understanding of the intricate relationships that exist in ecosystems and the importance of conservation and management practices in maintaining ecosystem health. |
| BIOL 3250 | Developmental Biology and Physiology | 4 | This course is designed to provide a comprehensive understanding of the principles of development and comparative physiology. It is designed to offer students a deep dive into the complex processes that govern the growth and development of organisms, as well as the physiological mechanisms that sustain life. |
| BIOL 3321 | Cancer Biology | 3 | Cancer is a diverse set of diseases driven by genetic and environmental factors, affecting nearly every tissue in the body. This course explores the molecular and cellular basis of cancer, including oncogenes, tumor suppressor genes, signaling pathways, and tumor progression. We will examine experimental models, diagnostic methods, and treatment strategies such as chemotherapy, targeted therapies, and immunotherapies. Clinical aspects, including pathology and ethics in cancer research, will also be discussed. |
| BIOL 4312 | Principles of Mammalian Physiology | 3 | This course introduces the fundamental principles of mammalian physiology with emphasis on the structure, function, and regulatory mechanisms of major organ systems. Topics include cellular transport processes, neuronal signaling, muscle activity, cardiovascular circulation, respiratory gas exchange, digestive function, renal regulation, endocrine control, metabolism, and reproduction. The course explores how these systems interact to maintain physiological balance within the body. Attention is given to the physical and chemical processes underlying biological function, helping students understand how coordinated organ systems support normal bodily activity. Demonstrations and practical exercises reinforce key physiological concepts and system integration. |
| BUSI 2213 | Business Analytics and Decision | 3 | This course is designed to equip students with the knowledge and skills to leverage business analytics for enhancing decision efficiency, driving profitability, and ensuring long-term sustainability in various business contexts, covering descriptive, predictive, and prescriptive analytics. Participants will explore how analytics contributes to management, finance, marketing, and organizational planning to optimize strategic decision-making. |
| BUSI 2400 | Entrepreneurship and Innovation | 3 | This course introduces the foundations of innovation and entrepreneurship, integrating economic and strategic perspectives to explore how new ideas are generated, developed, and transformed into successful ventures. Students will learn the theory and practice of entrepreneurship, with emphasis on the role of innovation, creativity, industrial organization, intellectual property, and networks in shaping competitive advantage. Through lectures, case studies, and applied projects, students will develop the knowledge and skills to evaluate entrepreneurial opportunities, design innovative business models, and understand the broader economic and social contexts of entrepreneurship. |
| BUSI 3010 | Business Ethics and Values | 3 | This course introduces the principles, frameworks, and applications of business ethics and values in contemporary organizations. Students will explore ethical theories, stakeholder perspectives, sustainability practices, global ethics issues, and the development of ethical corporate cultures. Through case studies, discussions, and applied assignments, students will develop the skills needed for ethical decision-making in diverse business environments. |

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| | | | |
|-----------|--|---|--|
| BUSI 3024 | Professional Networking and Career Readiness | 3 | This course develops competencies in professional networking and career readiness, emphasizing strategic relationship-building, labor market navigation, and full-time employment preparation. Students engage with frameworks for cultivating social capital, managing professional identity, and executing effective career search strategies. Through applied exercises, learners refine communication techniques, networking behaviors across digital and in-person contexts, and job acquisition skills, including resume development, interviewing, and offer negotiation. The course integrates contemporary practices aligned with global workforce expectations, preparing students to transition effectively into professional environments and sustain long-term career growth. |
| BUSI 3030 | Business Communication | 3 | This course provides an in-depth exploration of business communication principles, focusing on the creation of effective business documents and oral presentations. Students will develop skills in clear and concise communication tailored to professional audiences. The course includes the study and application of team communication, effective listening, intercultural communication, and the use of technology to facilitate the communication process. Emphasis is placed on collaborative projects, using digital tools, and presenting information in various business formats to meet organizational goals. |
| BUSI 3310 | Data Visualization | 3 | This course introduces the principles and practices of data visualization and data storytelling. Students will learn how to clean, analyze, and visualize datasets using Tableau in order to transform raw data into meaningful insights. The course emphasizes selecting appropriate visualization techniques, applying best practices in visual design, and communicating findings effectively. Through hands-on exercises and projects, students will develop skills in creating charts, interactive dashboards, and visual data stories to support data-driven decision making. |
| BUSI 4860 | Entrepreneurial Strategy | 3 | This course provides an overview of entrepreneurial strategy, small-business development, and the policy environment in which entrepreneurs operate. With a focus on both traditional small businesses and mission-driven ventures, students analyze how entrepreneurs recognize opportunities, validate problems, develop value propositions, build teams, design organizational structures, and scale emerging enterprises. The course emphasizes case analysis, stakeholder mapping, and systems thinking to help students understand the complex landscape new ventures must navigate. |
| CHEM 1721 | General Chemistry I | 4 | General Chemistry I is an introductory course that provides students with a foundational understanding of the principles and theories of chemistry. Topics covered include atomic structure, chemical bonding, stoichiometry, and the kinetic molecular description of the states of matter. Emphasis will be placed on developing problem-solving skills and critical thinking in the context of chemical phenomena. Laboratory experiments and demonstrations will complement theoretical concepts to enhance understanding. |
| CHEM 1722 | General Chemistry II | 4 | General Chemistry II is a continuation of General Chemistry I, focusing on advanced topics in chemistry, including chemical equilibrium, thermodynamics, kinetics, electrochemistry, and descriptive inorganic chemistry. The course aims to deepen students' understanding of chemical principles and their applications in various fields of science and technology. Laboratory experiments and problem-solving exercises will reinforce theoretical concepts. |
| CHEM 2310 | Organic Chemistry I | 4 | Organic Chemistry I serves as an introduction to the foundational principles of organic chemistry. The course focuses on the structures, properties, and chemical reactivity of carbon atoms in different hybridization states, particularly in alkanes (including cycloalkanes), alkenes, and alkynes. Additionally, various aspects of isomerism in organic compounds and reaction mechanisms (substitution, elimination, and addition) will be covered with an emphasis on electron flow. |
| CHEM 3043 | Biochemistry II | 4 | Biochemistry II examines the dynamic chemical processes that sustain life, with emphasis on metabolic pathways, energy transformation, and the molecular flow of genetic information. The course explores how cells generate, store, and utilize energy through interconnected metabolic networks and how these pathways are regulated to maintain cellular homeostasis. In addition, the course investigates the molecular mechanisms of DNA replication, transcription, and translation, along with regulatory systems that control gene expression. Integrating metabolic and genetic perspectives, the course highlights how biochemical pathways respond to physiological demands and environmental changes. |

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| | | | |
|-----------|----------------------------------|---|---|
| CHEM 3500 | Fundamentals of Thermodynamics | 4 | Thermodynamics is one of the most basic of physical sciences and almost defines the field of Mechanical Engineering. Topics include properties of a simple pure compressible substance, equations of state, the first law of thermodynamics, the second law of thermodynamics, internal energy, specific heats, entropy, and the application of the first law to a system or a control volume. Additionally, the course covers free energies, enthalpy, chemical potential, and the relationships between these quantities in various thermodynamic processes, including phase transformations and equilibrium states. After the completion of this course, students will be able to understand basic concepts, laws of thermodynamics and heat transfer and their applications. |
| COMM 1080 | Introduction to Public Speaking | 3 | This course is designed to develop students' skills in public speaking and to provide a comprehensive overview of the theories and practices that underlie effective communication. The content will cover: theory, practice, analysis, and ethics of public speaking. Students will learn how to analyze their audience and tailor their messages accordingly, how to organize their thoughts effectively, and how to make rhetorical choices and use various delivery techniques to engage and persuade their listeners. |
| COMM 2200 | Theory of Communication | 3 | This course is designed to explore the fundamental principles and theoretical frameworks of communication across various contexts. It aims to equip students with the knowledge and skills necessary to navigate diverse communication situations in both personal and professional settings. Students will examine key communication models, the role of verbal and nonverbal communication, the dynamics of interpersonal and group interactions, and the influence of media, culture, and technology on communication processes. Special emphasis will be placed on how communication theories apply to organizational settings, public discourse, and cross-cultural interactions. Through critical analysis and practical applications, students will develop a deeper understanding of how communication shapes human interactions and societal structures, enabling them to analyze and enhance their communication styles for more effective collaboration in different social and work environments. |
| COMM 2356 | Cross-Cultural Communication | 3 | This course explores the intricate dynamics of intercultural communication within the diverse context of multicultural Canada. Students will delve into the theoretical foundations that underpin effective communication across cultures and countries, gaining insights into the complexities of intercultural interactions. The primary focus will be on understanding, analyzing, and applying key theories relevant to communication in diverse cultural settings. |
| COMM 2700 | Argumentation and Debate | 4 | This course introduces students to the theory and practice of argumentation and debate as tools for critical thinking, public reasoning, and informed decision-making. Students learn how arguments are constructed, analyzed, challenged, and defended across academic, civic, and professional contexts. Classroom debates, structured exercises, and analytical writing help students strengthen their reasoning, communication, and evaluative skills. |
| COMM 4100 | Strategic Internal Communication | 3 | This course examines the principles and practices of strategic communication within organizations, with a focus on communication among internal stakeholders, including senior leaders, managers, and frontline employees. Students will explore communication flows, audience analysis, message design, digital communication platforms, leadership communication, change management, and employee engagement strategies. |
| COMP 1005 | History of Computing | 3 | Tracing the evolution of computing from ancient calculation tools to the digital age, this course explores the key technological, scientific, and social developments that shaped modern computing. Emphasis is placed on pivotal innovations, significant individuals and institutions, and the societal transformations driven by computing technologies. Students will investigate how computation has evolved across disciplines, industries, and cultures, and how these developments have impacted education, communication, labor, politics, and global connectivity. |
| COMP 1220 | Data Analysis with Excel | 3 | This course centers on Microsoft Excel as a core tool for conducting numerical calculations, data analysis, regression analysis, and developing scientific graphs. With a strong emphasis on its applications in chemistry, biochemistry, and allied scientific fields, it will walk students through leveraging advanced Excel techniques to solve equations, manipulate datasets, and analyze experimental findings. By the conclusion of the course, learners will have established a firm grasp of how to utilize Excel's built-in functions and tools to carry out scientific data processing, visualization, and interpretation effectively. |

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| | | | |
|-----------|---|---|---|
| COMP 1305 | Computer Programming in Python | 3 | This course will use Python as our primary programming language and compare it to the structures in other high-level programs. It surveys fundamental concepts in computer programming and data science, including data types, functions, modules, classes, and methods. Additionally, it goes deeper into the testing and debugging of a program. Students are required to write and run basic programs |
| COMP 1391 | Data Literacy | 4 | This course teaches core concepts and practical skills for data literacy and effective data visualization. Students learn to interpret, evaluate, analyze, and communicate data-driven information in academic, professional, and public settings. It integrates conceptual statistical reasoning with hands-on computational practice using R. The course focuses on data reasoning, identifying misleading statistical claims, and creating clear quantitative visualizations. It covers probability, sampling, statistical inference, and common analytical pitfalls, while building practical R workflows for data cleaning, transformation, and visualization. Instead of formula memorization, the course emphasizes applied data reasoning and critical interpretation. Through weekly exercises and visualization projects, students turn raw data into meaningful insights and communicate results via graphs, tables, and narratives. By completing the course, students gain foundational data analysis skills and the ability to assess data-driven arguments in society. |
| COMP 1500 | Discrete Mathematics for Computer Science | 3 | This course introduces fundamental concepts in discrete mathematics with a focus on applications in computer science. It provides a theoretical foundation for various aspects of computer science, including algorithms, data structures, and formal methods. Topics covered include logic, set theory, relations, functions, combinatorics, graph theory, and mathematical induction. Emphasis is placed on developing problem-solving skills and applying mathematical reasoning to solve real-world problems in computer science. |
| COMP 1700 | Digital Design | 3 | This course will delve into a wide range of topics that will equip students with the skills and knowledge necessary to excel in the field of digital design. In this course, advanced concepts such as interactive design, motion graphics, and responsive web design will be introduced. And this course contains several innovative techniques, such as design thinking, storytelling, gamification, VR/AR. In this course, students will gain a comprehensive understanding and practical skills in digital design, preparing them for the evolving design landscape. |
| COMP 2050 | Introduction to Computer Science | 4 | This course serves as a general introduction to computer science, aimed at dispelling the mystery surrounding computers. The computer is presented as a versatile tool capable of solving a wide range of problems. On one level, this course teaches students programming concepts, in particular, binary logic and algorithmic problem solving. On another level, this course uses programming as a means to an end, focusing on understanding the fundamental problems within computer science, such as looping, searching, sorting, and data structures. |
| COMP 2070 | Introduction to Informatics | 3 | This course explores the core principles of information science, examining how information is created, organized, retrieved, and applied across various contexts. Students will gain an understanding of the social, cultural, and technological factors that shape information systems and their use. The course emphasizes the interplay between theoretical concepts and practical applications, offering insights into the design, management, and ethical considerations of information systems. Through case studies and hands-on projects, students will develop critical skills for navigating the modern information landscape. |
| COMP 2112 | Data Structures and Algorithms | 3 | In this course, students engage with advanced programming by exploring the synergy between data structures and programming language features. The course emphasizes the design of large-scale software systems, focusing on object-oriented programming, data abstraction, polymorphism, and higher-order functions. Through a blend of theory and practical applications, students gain proficiency in crafting flexible, efficient, and scalable code structures. The course empowers participants to navigate complex programming challenges and contribute effectively to the development of sophisticated software systems. |
| COMP 2150 | Fundamentals of Information Technology | 3 | This course introduces the basic concepts of Information Technology, including computer hardware and software, operating systems, data representation, file systems, user management, networking, and basic cybersecurity. Students will also learn fundamental problem-solving and computer skills using command-line tools and simple programming concepts. |

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| | | | |
|-----------|--|---|---|
| COMP 2290 | Introduction to Scientific Programming with Python | 4 | This course introduces students to computational thinking and scientific programming using Python. Students will learn how to implement mathematical formulas, manipulate data structures, use libraries such as NumPy and SciPy, and visualize scientific data. The course emphasizes programming as a tool for solving problems in the natural and social sciences, focusing on simulation, modeling, and data analysis. By the end, students will be able to design, implement, and test scientific programs in Python, with a brief introduction to R for statistical computing. |
| COMP 3120 | Operating Systems | 3 | This course provides a comprehensive introduction to the fundamental concepts, theories, and design principles of operating systems. Topics covered include operating system structures, process management, memory management, synchronization, deadlocks, file systems, CPU scheduling, and virtual memory. Students will explore both theoretical underpinnings and practical implementations of operating systems, as well as concepts related to protection and security, distributed systems, and real-time operating systems. By the end of the course, students will have a solid understanding of how operating systems function, manage hardware resources, and ensure system stability and security in a multi-user environment. |
| COMP 3125 | Software Engineering | 3 | This course provides an in-depth exploration of both object-oriented and traditional software engineering methodologies, building upon the foundational analysis and design concepts previously introduced. It introduces students to the principles and practices of object-oriented programming (OOP) using C++. Emphasizing key OOP concepts such as encapsulation, inheritance, and polymorphism, the course provides a strong foundation in C++ syntax, structures, and libraries. Students will develop problem-solving skills through practical exercises, labs, and programming projects, enabling them to design and implement efficient, reusable, and maintainable software. |
| COMP 3135 | Algorithm Design and Analysis I | 3 | The core aim of this course is to provide a comprehensive understanding of algorithms as precise mathematical constructs. Students will delve into the fundamental principles of algorithm design, focusing on techniques for creating efficient and correct algorithms while addressing memory requirements. The course covers a range of topics, including Analysis of Algorithms, Algorithm Design Techniques, Computational Complexity. |
| COMP 3208 | Information Security | 4 | This course provides a comprehensive introduction to the principles, models, and technologies underpinning Information Security. It develops a systematic understanding of security threats, vulnerabilities, and countermeasures across computing systems, networks, and applications. Core topics include cryptographic foundations, authentication mechanisms, access control models, system and network security architectures, software vulnerabilities, and data protection strategies. The course also examines emerging security challenges, including cloud security, privacy preservation, and ethical and policy considerations. Emphasis is placed on integrating theoretical principles with practical security design and analysis. |
| COMP 3210 | Information Visualization | 3 | This course introduces the principles and techniques used to visualize complex data and information. Students learn how to represent abstract data visually using effective graphical encodings and layouts. The course explores the relationship between data, visual representation, and human perception to support exploration, analysis, and communication of information. Topics include data and task abstraction, visual encoding using marks and channels, spatial arrangement techniques, interactive visualization, and evaluation of visualization systems. Through lectures and laboratories, students will develop the skills needed to design and critique information visualizations. |
| COMP 3223 | Formal Language And Automata Theory | 3 | This course provides a rigorous introduction to the mathematical foundations of computation, focusing on formal languages and abstract models of computing machines. It systematically develops the theory of regular and context-free languages, as well as computability and decidability through recursive and recursively enumerable languages. Core machine models—including finite automata, pushdown automata, and Turing machines—are analyzed in terms of their expressive power and computational limitations. Emphasis is placed on formal definitions, proof techniques, and the relationships between language classes and computational models. |

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| | | | |
|-----------|---|---|---|
| COMP 3350 | Computer Systems Integration | 3 | This course provides an in-depth exploration of the fundamental components that constitute computer systems, starting from the foundational level of digital logic and hardware gates and extending to the complexities of compilers, programming languages, and software applications. The primary objective of this course is to offer students a comprehensive understanding of the hierarchical structure of computer systems and to demonstrate how the implementation of straightforward interfaces can facilitate the creation of sophisticated and robust computing solutions. |
| COMP 3410 | Computer Organization | 3 | This course introduces the principles of computer organization and the hardware and software interface. Students will learn the fundamental abstractions of computer systems, instruction set architectures, data path and control design, memory hierarchy, and parallel processing. Emphasis is placed on both theory and practice, with assignments in performance analysis, assembly programming, simulation, and processor design. |
| COMP 3500 | Computer Systems and C Programming | 3 | This course offers an in-depth exploration of the relationship between computer systems and the C programming language. Students will learn foundational concepts in both computer systems and C programming. The course covers low-level programming and the inner workings of computer systems, including memory management, processor architecture, and system-level I/O. Students will gain proficiency in C programming while also understanding how programs interact with the underlying hardware and operating system. Practical assignments will emphasize writing efficient and reliable C code that works seamlessly with computer systems. |
| COMP 3691 | Artificial Intelligence | 4 | Starting from many practical situations, this course will provide students with the basic concepts and techniques to help students understand artificial intelligence. The course will also cover ethical considerations and real-world applications of artificial intelligence. Students will learn the fundamentals of artificial intelligence, including problem solving, machine learning and natural language processing, AI programming and development. The goal is to provide students with practical hands-on skills to solve AI problems through programming assignments. |
| COMP 4012 | Computer Networking | 3 | This course provides a comprehensive introduction to computer networking concepts, architectures, protocols, and technologies. Students will explore both theoretical foundations and practical implementations spanning from physical transmission to security and application-layer services. The course follows a layered approach aligned with major reference models such as OSI and TCP/IP. |
| COMP 4100 | Programming Language Fundamentals | 3 | This course offers an overview of general features of programming languages and explanation of basic methods of language implementation. Design and programming of particular parts of compilers are supported by elements of the theory of grammars and automata. Students will learn programming language syntax, parsing, semantics, and type systems, and apply these concepts using languages like Scheme, ML, or Haskell. The course covers control flow, data abstraction, polymorphism, concurrency, and optimization techniques to prepare students for building efficient, maintainable software. By the end of the course, students will be able to design and implement advanced programs while understanding the underlying principles that guide programming language design and execution. |
| COMP 4224 | Applied Analytics and AI Programming for Business | 3 | This course develops technical and analytical competencies for applying data analytics, machine learning, and artificial intelligence within business contexts using Python. It integrates programming for data extraction, transformation, and management with statistical modeling, predictive analytics, and AI-driven decision-making. Students will learn to prepare and structure data for machine learning workflows, implement and interpret analytical models, and communicate insights through programmatic visualization. Emphasis is placed on practical business applications, ethical data practices, and mindful data management strategies informed by contemporary analytics frameworks and case-based reasoning. |

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| | | | |
|-----------|--|---|--|
| COMP 4255 | Pattern Recognition and Machine Learning | 4 | This course delves into the fundamental principles of pattern recognition and machine learning, offering a comprehensive exploration of both theoretical concepts and practical applications. Students will delve into supervised and unsupervised learning techniques, gaining insights into regression, classification, and clustering algorithms. Through rigorous mathematical analysis and hands-on implementation, students will develop a solid understanding of algorithmic mechanisms and their implications in real-world scenarios. Additionally, the course covers advanced topics including ensemble methods, deep learning architectures, and Bayesian inference, empowering students to tackle complex data analysis tasks with confidence. Combining theoretical knowledge with practical skills through projects and assignments, students will be adept at using machine learning techniques to extract meaningful patterns and insights from diverse data sets, with a focus on application in R. |
| COMP 4315 | Applied Data Analysis | 4 | This course examines the application of data analysis to complex problem-solving, with an emphasis on advanced methods for data transformation, modeling, and interpretation. Adopting a coding-supported and tool-oriented approach, the course introduces techniques for pattern discovery, predictive modeling, and relational analysis within complex datasets. Through guided projects and independent work, students develop rigorous analytical reasoning and gain experience in evaluating models, interpreting results, and drawing defensible conclusions from structured and unstructured data across diverse domains. |
| COMP 4510 | Computer Vision | 3 | This course provides a comprehensive introduction to the fundamental concepts and techniques in computer vision. It focuses on the development of algorithms and applications that allow computers to interpret and analyze visual information from the world. Key topics covered include image formation, segmentation, feature extraction, matching, depth estimation, object recognition, and dynamic scene analysis. Emphasis is placed on both theoretical foundations and practical implementation, with a mix of lectures, assignments, and hands-on computer projects. By the end of the course, students will understand how to design and implement computer vision systems capable of solving problems in various fields, including autonomous navigation, industrial inspection, medical image analysis, and more. |
| COMP 4760 | Distributed Systems | 4 | This course introduces the fundamental concepts, design principles, and technologies underlying distributed systems. It will explore the abstractions and implementation techniques behind the construction of distributed systems. Key topics include distributed systems principles, communication, naming, synchronization, fault tolerance, security, consistency and replication, distributed file systems, Internet and web protocols, and scalability. |
| COMP 4900 | AI, Data, and Society | 4 | This course examines the complex relationships between artificial intelligence (AI), data science, and society. It explores how computational technologies shape social, economic, and political systems, and how ethical frameworks and public policies can guide their responsible development and use. Through the study of ethical frameworks, practical tools, and real-world case studies, students will develop the ability to identify, analyze, and respond to issues such as bias, privacy, accountability, and the societal impacts of AI. |
| COMP 4920 | Artificial Intelligence for Business | 3 | This course explores how artificial intelligence (AI) is transforming business. Students will learn the basics of AI, machine learning, deep learning, and generative AI, and see how these technologies are applied in finance, marketing, operations, and human resources. The course also covers ethical considerations, data governance, and building business cases for AI adoption. Students will gain practical skills to evaluate, implement, and manage AI solutions responsibly in a business context. |
| ECON 1060 | Introduction to Microeconomics | 3 | This course offers students a fundamental understanding of microeconomic principles. It covers supply - demand, consumer behavior, production, and more. Through lectures, readings, discussions, and exercises, students gain analytical tools to grasp microeconomic concepts and real-world economic issues. |
| ECON 1080 | Introduction to Macroeconomics | 3 | This course provides students with a comprehensive understanding of the principles, concepts, and analytical tools that govern the study of the broader economic system. Topics contain the components of aggregate demand, national income determination, and multiplier theory, business cycles, and more. Through a blend of theoretical exploration, real-world applications, and critical thinking exercises, this course offers a solid introduction to the macroeconomic factors that shape national economies and impact global markets. |

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| | | | |
|-----------|---|---|--|
| ECON 2043 | Macroeconomic Theory II | 3 | This course is an advanced course that builds upon the foundational concepts introduced in Macroeconomic Theory I, delving deeper into the analysis of macroeconomic phenomena, exploring the dynamics of aggregate economic variables. Topics include national income, employment, the rate of interest, the price level, and more. The course is designed for students with a solid understanding of basic macroeconomic principles who wish to gain a more comprehensive and nuanced understanding of macroeconomic theory and its applications. |
| ECON 2044 | Microeconomic Theory I | 3 | A concentration on microeconomic theory. Modules contain theory of consumer choice; elements of production and cost. Price and output determination in competitive markets will be discussed in the topics. This course serves as a crucial foundation for further studies in economics and related fields. Students will gain insights into the microeconomic forces that shape the behavior of consumers, firms, and markets. |
| ECON 2104 | Intermediate Microeconomics I | 3 | This course offers an in-depth analysis of key concepts and models used to understand the behavior of consumers, firms, and markets. This course will explore core areas of microeconomic theory, including economic methodology, consumer theory, the theory of the firm, competitive markets, and efficiency. Emphasis will be placed on understanding how these theories apply to real-world economic policies and decision-making processes. Students will gain insight into how microeconomic principles influence public policy decisions, focusing on how market structures and behavior shape economic outcomes and the role of government intervention. |
| ECON 2114 | Intermediate Microeconomics II | 3 | Intermediate Microeconomics II is a continuation of Intermediate Microeconomics I, delving deeper into advanced topics in microeconomic theory. The course primarily focuses on some key areas: general equilibrium and welfare, imperfect markets, and market failure. To fully understand imperfect markets and information, students will also be introduced to strategic interactions and game theory. The emphasis throughout the course is on developing a strong conceptual understanding while utilizing real-world examples and applications. |
| ECON 2134 | Probability and Statistics for Economists | 3 | This course introduces the fundamental statistics concepts. Probability and statistical concepts play an important role in economic analysis and applications. The emphasis is on using statistical methods to make economic decisions. Key topics include descriptive statistics, random variables and probability, point and interval estimation, sampling distributions, hypothesis testing. Students will learn the principles of collecting, organizing, and summarizing economic data. |
| ECON 2135 | Econometrics I | 3 | This course introduces students to the fundamental concepts, principles, and methodologies used in econometric analysis. Key topics will be covered, including simple regression model, regression analysis, omitted variable bias, ordinary least squares, heteroskedasticity, dummy variables, panel data methods, instrumental variables estimation, hypothesis testing in the linear regression model, etc. By the end of the course, students will have gained practical skills in econometric analysis and be equipped to conduct empirical research in economics. |
| ECON 2910 | Pre-Industrial Global Economics | 3 | This course offers a comprehensive exploration of global economic history before the Industrial Revolution, with a particular focus on diverse regions such as England, China, Polynesia, and Pre-Columbian America. Students will analyze the economic dynamics of these distinct societies, examining factors such as trade practices, agricultural systems, and socio-economic structures. By comparing and contrasting the development trajectories of these regions, the course seeks to uncover the unique influences that shaped their pre-industrial economies. |
| ECON 3040 | Intermediate Macroeconomics I | 3 | Intermediate Macroeconomics I delves into the core concepts and models essential for understanding the functioning of modern economies. The course covers the short-run, medium-run, and long-run behavior of aggregate economies, focusing on output, unemployment, inflation, and growth. It introduces students to analytical tools and macroeconomic frameworks to evaluate economic performance, policy decisions, and global economic interconnections. Real-world applications are emphasized to foster a comprehensive understanding of macroeconomic theories and their implications. |

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| | | | |
|-----------|---------------------------------------|---|---|
| ECON 3041 | Intermediate Macroeconomics II | 3 | Intermediate Macroeconomics II deepens the analysis of national income determination, business cycle dynamics, and the roles of monetary and fiscal policies. The course emphasizes both closed and open economy frameworks and explores key issues such as capital accumulation, government debt, exchange rate regimes, and policy trade-offs. Through model-based reasoning, students will examine long-term economic growth and short-run fluctuations, with attention to real-world data and policy debates. The course integrates theoretical frameworks with historical and contemporary policy discussions relevant to global macroeconomic stability. |
| ECON 3051 | Econometrics | 3 | This course introduces students to the fundamental concepts and techniques of econometrics, focusing on economic applications of statistical methods. Students will learn how to use simple and multiple regression analysis to analyze economic relationships, test hypotheses, and make economic predictions. By the end of the course, students will be able to critically evaluate economic models and apply econometric techniques to real-world economic problems. |
| ECON 3114 | International Macroeconomics | 4 | International Macroeconomics examines how national economies interact through trade, capital flows, and exchange rate systems in an increasingly interconnected global economy. This course explores the determination of key macroeconomic variables—including output, inflation, interest rates, exchange rates, and the trade balance—from an international perspective. Emphasis is placed on how global financial markets, monetary and fiscal policies, and international institutions influence macroeconomic performance across countries. Students analyze exchange rate determination, balance of payments adjustments, financial globalization, and currency crises while also examining the policy choices governments face under different exchange rate regimes. Through theoretical models and empirical examples, the course develops an understanding of how international macroeconomic forces shape the global business environment and economic stability. |
| ECON 3120 | Industrial Organization | 3 | This course provides an introductory exploration of strategic behaviors exhibited by firms operating within imperfectly competitive markets. Topics covered encompass various aspects such as market concentration, mergers, entry deterrence, product differentiation, advertising, and regulation. Additionally, the course delves into the theory of industrial organization, emphasizing the analysis of strategic interactions among market participants in scenarios with limited competition. Drawing upon principles from Microeconomics and Game Theory, students will examine the behavior of profit-maximizing firms, exploring market structures and competitive strategies. The curriculum includes a comprehensive review of firm theory, analysis of monopolistic conduct, and game theoretic methods to study oligopolistic behavior across different competitive environments. Real-world applications are integrated throughout the course, providing insights into industry performance and regulatory considerations. |
| ECON 3350 | Regional and Urban Economics | 3 | Urbanization drives economic growth, but unfolds differently across developed and developing countries. This course explores the forces behind rapid urbanization, the role of migration, and the structure of formal and informal labor markets. It examines agglomeration economies, housing markets, infrastructure, and the economic trajectories of cities driven by high-value commodities versus manufacturing and services. Students will analyze urban transportation, governance, and environmental challenges while assessing the impact of urbanization on poverty, inequality, and upward mobility. Through theoretical models and case studies, the course provides insights into sustainable urban development and regional economic strategies. |
| ECON 3510 | Economics of Less Developed Countries | 4 | This course examines the economic conditions, challenges, and opportunities in less-developed regions. It explores the factors contributing to underdevelopment, the role of government and international institutions, and strategies for sustainable economic growth and poverty alleviation. Students will develop analytical skills to evaluate development issues and propose evidence-based solutions. |
| ECON 3516 | Central Banking and Monetary Policy | 3 | This course delves into the intricate world of Money and Banking, exploring the fundamental structures of financial institutions and their pivotal roles in the creation and distribution of money and near-money assets. Students will gain a comprehensive understanding of the Federal Reserve System, examining its inner workings and the techniques employed by central banks in controlling the supply of financial assets to implement effective stabilization policies. |

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| | | | |
|-----------|--|---|---|
| ECON 3650 | Financial Markets and Institutions | 3 | Financial Markets and Institutions provide the foundational knowledge necessary for understanding the structure, functions, and operations of financial systems. This course explores various financial instruments, institutions, and regulatory frameworks that govern modern financial markets. Through a blend of theoretical concepts and practical applications, students will develop a comprehensive understanding of how financial markets operate and their crucial role in the economy. |
| ECON 4101 | Applied Game Theory | 3 | Game theory is a mathematical framework that explores the strategic interactions between rational decision-makers and is widely used in economics, political science, biology, computer science, and many other fields. This course bridges the gap between theory and real-world decision-making by examining the strategic aspects of situations where multiple parties make choices that impact each other. In this course, students will learn how to model and analyze strategic interactions, including competitive, cooperative, and mixed strategies. |
| ECON 4105 | Advanced Econometrics | 3 | This course provides practical econometric skills for analyzing economic data, estimating causal effects, conducting inference, and addressing issues related to single equations. Building on foundational probability and statistics, students learn to apply regression methods, instrumental variables, panel data models, experiments, nonlinear modeling, time-series analysis, and machine-learning-based prediction. Students will gain hands-on experience with econometric software, real datasets, and modern empirical strategies. |
| ECON 4115 | International Finance | 3 | ECON 4115 provides students with engaging, balanced coverage of the key concepts and practical applications of International Finance. Topics covered include balance of payments, exchange rates, economic policies, International Monetary System, financial globalization, and International financial institutions. Core theoretical principles will be complemented by a series of application chapters that confront policy questions using the latest empirical work, data, and policy debates. |
| ECON 4605 | Applied Econometrics | 3 | This course provides a comprehensive introduction to econometrics, focusing on practical application and empirical analysis. Students will learn to construct, estimate, and interpret regression models using real-world data, emphasizing evidence-based insights. Topics include model estimation, hypothesis testing, diagnostic testing, and case studies to reinforce data-driven economic reasoning. |
| ENGL 1130 | Introduction to Native American Literature | 3 | This course analyzes Native American history, written works, and oral traditions. Students will read chronicles and commentaries on published texts, narratives, oratorical, and prophetic tribal epics. Students will become deeply familiar with the rich tradition and wide variety of literature by Native American peoples—learning a bit about indigenous cultures, histories, identities, thought, issues, concerns, and strategies over time, and in an ever-changing world. |
| ENGL 1141 | Writing Workshop | 1 | This course offers an immersive introduction to creative writing in a collaborative workshop setting. Students will develop their skills in crafting character-centered stories, poetry, and prose through imaginative exercises, readings, and group discussions. Emphasis is placed on experimentation, constructive critique, and nurturing each writer's unique voice. Students will explore diverse genres and perspectives while refining their ability to write and evaluate creative work. By the end of the course, each student will produce a portfolio of polished pieces and may share their work in a final public reading or submission opportunity. |
| ENGL 1150 | Writing as Critical Inquiry | 3 | This course is designed to elevate your proficiency in writing, reading, and research. Through critical examination of texts, you will refine your reading skills, pose thought-provoking questions, and establish meaningful connections that will be incorporated into your writing. Employing rhetorical strategies, you will craft well-supported claims within discussions centered on diverse literacy perspectives. The course aims to not only enhance your writing abilities but also deepen your understanding of the nuanced interplay between reading, questioning, and research in the construction of compelling and informed written expressions. |
| ENGL 1156 | Academic Essay Writing | 3 | The course is designed to equip students with the essential skills and techniques in academic essay writing. The course emphasizes preparation of research papers, essay organization, paragraph writing, rewriting and revising of the essay, and proper acknowledgment of sources. By the end of this course, Upon completing this course, students should be able to conduct independent research on a specific topic and construct a persuasive argument using grammatically correct prose. |

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| | | | |
|-----------|---------------------------------------|---|--|
| ENGL 1326 | Literature and Film | 3 | This course examines the dynamic relationship between literary texts and their cinematic counterparts, emphasizing how narrative, form, and meaning shift across media. Students will engage in close reading of novels, short stories, and poems alongside critical viewing of films, analyzing adaptation as both interpretation and creative transformation. The course explores narrative structure, visual language, authorship, and cultural context through representative works such as <i>Pride and Prejudice</i> and its film adaptations, <i>The Great Gatsby</i> , and <i>Blade Runner</i> (adapted from <i>Do Androids Dream of Electric Sheep?</i>). Attention is given to how meaning is reshaped through cinematic techniques such as <i>mise-en-scène</i> , editing, sound, and performance, as well as how literary devices are translated or reimagined on screen. |
| ENGL 1500 | Selected Topics in Literature | 3 | This course is designed to enhance students' critical reading skills and cultivate their abilities in coherent discourse through the exploration of selected topics in literature and composition. Emphasizing the proper use and acknowledgment of sources, students will engage in discussions and complete written assignments based on readings from various genres. The course aims to develop analytical thinking, writing proficiency, and a deeper appreciation for literature. |
| ENGL 2120 | Introduction to Literature | 3 | This course is focused on building your reading, writing, and research skills through the study of fiction, poetry, and drama. Students will learn to interpret and discuss literary texts, develop arguments, and practice clear, effective composition across analytical and creative forms. |
| ENGL 2400 | Introduction to Popular Culture | 3 | This course introduces students to key methods and theories for analyzing contemporary popular culture. Through film, television, literature, memes, advertising, music, video games, street art, and digital media, students learn how everyday cultural forms shape social identities, values, and power dynamics. The course emphasizes critical thinking, media literacy, and clear, persuasive academic writing about culture. |
| ENGL 2620 | Twentieth-Century American Literature | 3 | This course surveys major developments in American literature from the early 1900s to the end of the twentieth century. Students will explore key literary movements—including Modernism, the Harlem Renaissance, Postmodernism, and contemporary multicultural writing—through novels, poetry, drama, and essays. The course emphasizes the relationship between literature and historical, cultural, and social contexts such as war, industrialization, race, gender, and identity. Through close reading and critical analysis, students will develop an understanding of how American writers responded to and shaped the rapidly changing twentieth century. |
| ENGL 2650 | Digital Writing and Social Media | 3 | This advanced writing course examines how digital rhetoric shapes public discourse, identity, performance, and social activism in contemporary media. Drawing on case studies of hashtag movements, algorithmic surveillance, and online self-presentation, students will analyze how digital platforms transform communication. Through research-informed projects, participants will create multimodal content that engages with issues of knowledge equity, community formation, and digital authority. The course emphasizes both critical analysis of digital genres and the development of ethical, effective communication strategies for diverse online audiences. |
| ENGL 3050 | Advanced Writing Workshop | 3 | This course provides advanced instruction and practice in writing processes, rhetorical strategies, and stylistic techniques. Students will explore how writing functions in academic, professional, and public contexts and examine how writers adapt texts to specific audiences, purposes, and rhetorical situations. Through intensive reading, writing, peer review, and revision, students will strengthen their analytical, rhetorical, and stylistic skills. The course also emphasizes collaboration, research-based writing, and reflection on literacy development, while offering opportunities to practice multiple non-fiction genres, including narrative, analysis, explanation, critique, and argument. |
| ENGL 3300 | Global Perspectives in Literature | 3 | This course examines contemporary global literature through the lenses of identity, translation, migration, and border-crossing. Working with novels, memoirs, poetry, and theoretical essays, students analyze how writers navigate cultural, linguistic, political, and personal borders. Through weekly pairings of literary texts and theoretical readings, students explore how narratives shape understandings of identity and belonging in a global world. |

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| | | | |
|-----------|------------------------------------|---|---|
| ENGL 3420 | Scientific Writing | 3 | This course introduces students to the principles and practices of scientific writing across a range of genres, including research articles, proposals, and public-facing communication. Emphasizing clarity, precision, and integrity, the course guides students through the full writing process—from planning and literature review to drafting, revising, and presenting scientific work. Students will learn the standard structure of scientific papers (IMRaD), develop skills for writing each section effectively, and practice adapting complex scientific information for diverse audiences. The course also covers visual and oral communication, collaborative writing, and ethical considerations in scientific communication. |
| ERTH 1205 | Environmental Science Fundamentals | 3 | This course offers a comprehensive exploration of Earth's various environmental systems, the environmental challenges it faces, and the root causes behind these issues. Students will embark on a journey to understand the intricate relationships between human activities and the natural world, gaining insights into the complexities of environmental processes and their impact on ecosystems. |
| EXSC 1800 | Introduction to Sport Management | 3 | This course provides a comprehensive overview of the sport management field, introducing students to the structure, functions, and challenges of the sport industry. Students will explore foundational management principles, key sectors of sport (youth, interscholastic, intercollegiate, and professional), sport marketing, finance, communication, legal and ethical issues, and global perspectives. |
| FILM 2100 | Introduction to Film Studies | 3 | This course provides an introduction to the study of film, focusing on the fundamental techniques, vocabulary, and methods of film analysis. Students will explore the aesthetics, forms, styles, and techniques of cinema, learning how to critically engage with film as both an art form and a cultural text. Key areas of study include narrative structure, mise-en-scène, cinematography, editing, sound, and genre theory, along with an examination of influential filmmakers and film movements. Through screenings, discussions, and written assignments, students will develop analytical skills and a deeper understanding of how films convey meaning. |
| FILM 2300 | Film History I | 3 | Film History I introduces students to the rich film history and the evolution and development of this powerful medium of expression. Key themes include the history of American and international filmmaking from 1895 to 1960, the Hollywood film studio system. The course explores the cultural, technological, and artistic advances that have shaped the film medium. Students will learn about key film history milestones, influential filmmakers, and groundbreaking films that have shaped film art and industry. |
| FILM 3150 | American Film History | 4 | This course offers a comprehensive survey of American film history from its origins in the late 19th century to the contemporary media landscape. Students will examine the evolution of the American film industry alongside major technological innovations, economic transformations, regulatory frameworks, and cultural developments. |
| FILM 3460 | Nazis in Film | 4 | This course explores changing representations of Nazis in German film, from the propaganda of the “Third Reich” to postwar cinematic reckonings with guilt, memory, and moral responsibility. It examines how German filmmakers across decades have depicted the longing for strong leadership, pleasure at inflicting pain on enemies, and fear of racial and cultural others. Through close readings of key films, historical contexts, and evolving aesthetic strategies, students will analyze how cinema both shaped and reflected Germany’s confrontation with its Nazi past. The course considers film as a site of national self-examination and ideological struggle, tracing the transformation from glorification to condemnation and, more recently, to ironic or revisionist portrayals. |
| FINC 2132 | Financial Management Fundamentals | 3 | This course serves as an introduction to the fundamental principles of corporate financial management, providing students with a comprehensive understanding of key concepts that form the basis of financial decision-making within organizations. Participants will explore critical topics such as the time value of money, interest rates, principles of valuation, net present value (NPV), risk and return, and cost of capital. |
| FINC 3500 | Corporate Finance | 3 | Corporate Finance is designed to provide students with a comprehensive understanding of financial principles and techniques relevant to decision-making within corporations. The course covers various topics such as capital budgeting, cost of capital, financial analysis, capital structure, dividend policy, and risk management. Through theoretical concepts and practical applications, students will develop the skills necessary to evaluate financial opportunities and make informed strategic decisions to maximize shareholder value. |

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| | | | |
|-----------|---|---|--|
| FINC 3702 | Advanced Corporate Finance | 3 | This course provides an in-depth examination of the theoretical and practical aspects of corporate finance. Building on fundamental financial concepts, it explores advanced topics in capital structure, financing decisions, and corporate governance, focusing on real-world applications. Students will analyze financial strategies through case studies, financial modeling, and current research to understand how corporations manage risk, value assets, and maximize shareholder wealth in an ever-changing market environment. |
| GEOG 1250 | World Regional Geography | 4 | This course examines the major world regions through a geographic lens, emphasizing spatial patterns, cultural landscapes, political organization, economic development, environmental challenges, and globalization. Students will explore how physical geography, historical processes, and cultural systems shape regional identities and global interconnections. |
| GEOG 2070 | Remote Sensing | 4 | This course comprehensively introduces the principles, physics, sensor technology, processing, and applications of remote sensing across the electromagnetic spectrum, with a focus on Earth systems, including the atmosphere, land, and oceans. It covers the basic scientific principles of remote sensing, the physics of electromagnetic radiation, and the complex interactions between radiation and the Earth's surface and atmosphere. Laboratory sessions require students to apply theoretical concepts to data collection and interpretation using software such as Geomatica© and SNAP. |
| GEOG 2092 | Quantitative Methods in Earth and Environment | 4 | This course teaches quantitative methods fundamental to analyzing natural and social science data in Earth and environmental studies. It covers how environmental phenomena are studied via data collection, organization, visualization, and statistical modeling, with a focus on how ecology, geography, geology, environmental economics, sociology, and remote sensing use quantitative evidence to explain environmental processes and human–environment interactions. Students build statistical literacy through model-based reasoning linking real-world environmental questions to analytical methods. Core topics include data representation, variability and uncertainty, hypothesis formulation and testing, correlation, ANOVA, and regression modeling, with emphasis on using statistical models to examine variable relationships, evaluate explanations, and support scientific inference. Using spreadsheet tools, students analyze authentic environmental datasets from observational and applied research. Lab exercises and practical work teach them to interpret quantitative results, assess model reliability, and communicate environmental findings using graphs and statistical evidence. |
| GEOG 2420 | Geography of Cultural Landscapes | 3 | This course delves into the intricate relationship between culture and place. It examines the role of culture in shaping and influencing the physical and social landscapes, as well as how geography plays a fundamental role in the formation and expression of diverse cultures. Through a geographic lens, students will explore how cultural practices, traditions, values, and identities are spatially manifested and interact with the surrounding environment. The course will critically analyze the dynamic interplay between culture and place, addressing topics such as cultural landscapes, cultural diffusion, and the impacts of globalization on local cultural expressions. |
| GEOG 3521 | Physical Climatology | 3 | This course explores the dynamics of the climate system, focusing on the interactions between the atmosphere, oceans, cryosphere, and land surfaces. It covers key concepts like the carbon cycle, the greenhouse effect, natural climate variability, and climate sensitivity to external factors. Students will investigate both historical climate phenomena and human-induced climate change. Emphasis is placed on understanding physical principles and applying climate models to assess past, present, and future climate trends. |
| HIST 2021 | Introduction U.S. History to 1876 | 3 | This course presents the political, social, economic, and cultural history of the United States from the beginning of the colonial period to the end of reconstruction in 1876. Exploring topics such as the colonial period, revolution, confederacy, and constitution, the Civil War, and reconstruction, students will examine the fundamental events and ideas that shaped the nation and its people during this critical period. Students gain a comprehensive understanding of United States history to 1876. |
| HIST 2022 | U.S. History Since 1877 | 3 | This course offers a comprehensive exploration of the United States' historical evolution since 1877. It delves into the multifaceted tapestry of American society, with a strong emphasis on the incredible diversity of the American people. Throughout the semester, we will engage in a detailed examination of how an American society comprising numerous cultures and ethnicities has evolved, adapted, and transformed over the past century and a half. |

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| | | | |
|------------|-----------------------------|---|--|
| HIST 2800 | Digital History | 3 | Digital History introduces students to the methods, tools, and critical debates shaping historical scholarship in the digital age. The course focuses on historical data mining, computational text analysis, digital mapping, visualization, and web-based presentation of historical materials. Students will learn how historians use new technologies to analyze large datasets, interpret digitized archives, and communicate research to public audiences online. |
| HIST 3600 | American Religions | 3 | This course investigates the role of religion in shaping American life from pre-colonial Indigenous traditions to the twenty-first century. We will explore how religion intersected with politics, identity, social movements, law, and memory. Through primary sources and scholarly debates, students will critically examine the evolution and influence of religious ideas and institutions in American history, addressing key themes such as pluralism, religious freedom, civil religion, and the culture wars. |
| JAPAN 2011 | Elementary Japanese I | 3 | Designed for students with little or no prior experience in the Japanese language, this course focuses on developing basic skills in speaking, listening, reading, and writing in Japanese. Students will learn essential vocabulary, grammar, and sentence structures necessary for simple daily communication. Through interactive activities, cultural insights, and practical exercises, students will begin to develop their ability to communicate in everyday situations and gain an understanding of Japanese culture. |
| KORN 1020 | Introductory Korean I | 3 | Introductory Korean I is a beginner-level course designed to introduce students to the Korean language and culture. With a focus on developing basic communication skills in speaking, listening, reading, and writing, the course covers essentials such as Hangeul script, vocabulary, and grammar. Topics include greetings, daily routines, family, and travel expressions. Cultural insights are integrated. |
| MARK 1300 | Introduction to Marketing | 3 | This course introduces the basic principles of marketing, covering key concepts and processes such as customer relationship management, marketing planning, understanding customers and competitors, developing marketing strategies (segmentation and positioning), and marketing programs (products, pricing, channels, communication). The course will discuss strategic-level marketing concepts and specific analytical methods. Additionally, it will cover topics such as ethical issues in marketing, corporate social responsibility, and the impact of technology on marketing. |
| MARK 3107 | Sports Marketing | 3 | This course examines the application of core marketing principles within the sport industry, emphasizing strategic decision-making in a dynamic and highly competitive environment. It explores the structure and unique characteristics of sport markets, including the behavior of sport consumers, the role of branding, and the integration of promotional and sponsorship strategies. Students analyze contemporary industry trends that necessitate data-driven and professional marketing approaches, including globalization, digital media, and fan engagement. The course also addresses key functional areas such as market research, pricing, distribution, and integrated communication strategies as they apply specifically to sport organizations, events, and products. |
| MATH 1526 | Introduction to Calculus I | 4 | Calculus I introduces the fundamental concepts of differential and integral calculus. Students will develop an understanding of functions, limits, derivatives, and integrals, along with practical techniques and applications. This course provides the foundation for further study in mathematics, science, and engineering. |
| MATH 2015 | Introduction to Calculus II | 3 | MATH 2015 is the second course in the calculus sequence. It builds upon the concepts covered in MATH 1526 (Introduction to Calculus I) and delves deeper into integration techniques, applications of integrals, sequences, series, and more. The course aims to develop students' understanding of calculus and its applications in various fields. |
| MATH 2245 | Multivariable Calculus | 3 | This course extends the principles of calculus from single-variable functions to functions with multiple variables. Topics include vectors, vector-valued functions, Green's Theorem, Stokes' Theorem, and Gauss' Theorem, multivariable functions, partial derivatives, multiple integrals, line integrals, surface integrals, vector fields, and their applications. Additionally, students will explore applications in physics, engineering, and other fields. |

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| | | | |
|-----------|---|---|---|
| MATH 2246 | Calculus with Analytic Geometry III | 3 | This course is the third part of a multi-semester sequence in calculus with analytic geometry. It builds on previous calculus courses by introducing advanced concepts in multivariable calculus, vector analysis, and their applications in real-world problems. Topics include vector algebra, vector-valued functions, partial derivatives, multiple integrals, vector fields, and the fundamental theorems of vector calculus. This course is designed for students pursuing mathematics, physics, engineering, or other fields that require a strong foundation in advanced calculus. |
| MATH 2250 | Elementary Real Analysis | 3 | This course provides a fundamental exploration of real analysis, emphasizing key concepts such as real numbers, sequences, series, infinite sums, sets, basic topology, continuous functions, differentiation, integration, the theorem of calculus, function sequences and series, power series, and metric spaces. Students will develop a strong foundation in the principles of analysis, enabling them to rigorously understand and apply mathematical concepts in various contexts. |
| MATH 2423 | Probability | 3 | This course offers an overview of probability theory and its applications in various scientific fields. The course covers the mathematical treatment of random events occurring in natural, physical, and social sciences. Topics include mathematical probability axioms, combinatorial analysis, binomial distribution, conditional probability and independence, Poisson distribution, normal distribution, random variables, probability distributions, moments, sampling distributions, expectations, and limit theorems. |
| MATH 2452 | Elementary Differential Equations | 3 | This course serves as a fundamental exploration of one of the most critical branches of mathematics, aiming to equip students with the essential knowledge and skills to understand, analyze, and solve differential equations. The course introduces some typical topics of differential equations, such as first and second order linear, Laplace transform and power series. Throughout the course, students will work on a variety of exercises and practical problems to reinforce their understanding and problem-solving skills. |
| MATH 2455 | Introduction to Biostatistics | 3 | This course introduces probability and statistical analysis with applications in biostatistics, focusing on biological, health, and environmental sciences. Students will explore key probability distributions, hypothesis testing, regression, and using computational tools for data analysis. The purpose of the course is to introduce students to foundational concepts within the field, foster a statistical perspective for interpreting health-related data, and develop essential critical evaluation skills to assess the credibility of research evidence. |
| MATH 2500 | One Variable Calculus II | 3 | One Variable Calculus provides students with a comprehensive understanding of calculus concepts and techniques that are essential for various STEM disciplines, including engineering, economics, physical and biological sciences, statistics, and data science. The course covers topics such as calculus of elementary transcendental functions, techniques of integration, indeterminate forms, Taylor's formula, and infinite series. Through lectures, problem-solving sessions, and practical exercises, students will develop proficiency in calculus applications and problem-solving strategies. An honors version of the course is available for students seeking additional challenges and advanced learning opportunities. |
| MATH 2825 | Introduction to Complex Analysis | 3 | This course provides a comprehensive introduction to complex variable theory and its applications to current engineering problems. It deals with complex numbers, analytic functions, integration, Laurent series, residue calculus, and conformal mappings. The course also covers one or more applications of the theory are reviewed. |
| MATH 2849 | Elementary Differential Equations and Laplace Transformations | 3 | This course is designed to provide a comprehensive introduction to the theory and application of Ordinary Differential Equations (ODEs) with a special focus on solving them using the powerful Laplace Transform. Throughout the course, students will engage in hands-on exercises and computational assignments using mathematical software to solve ODEs and apply the Laplace Transform to various problems. Topics include First order equations, Linear differential equations of higher order, Differential operators, Laplace transforms, and more. |
| MATH 2851 | Foundations of Stochastic Processes | 3 | This course provides a foundational understanding of stochastic processes, focusing on key concepts such as Markov chains, random walks, martingales, Galton-Watson trees, branching processes, Poisson processes, point processes, birth and death processes, queuing theory, stationary processes, as well as simulation and inference for stochastic models. Through theoretical study and practical applications, students will develop the necessary tools to analyze and model random phenomena in various fields, including mathematics, statistics, engineering, and finance. |

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| | | | |
|-----------|--|---|--|
| MATH 3009 | Introduction to Calculus III | 3 | Calculus III builds on single-variable calculus to introduce multivariable calculus, vector-valued functions, and advanced integration techniques in two and three dimensions. Students will explore parametric and polar representations of curves, sequences and series, vector geometry, functions of several variables, multiple integrals, and vector calculus. |
| MATH 3010 | Regression Analysis | 3 | Regression Analysis estimates relationships between independent variables and a dependent variable. This course is intended to introduce the basic ideals and models of regression analysis, including its interpretation and implementation in the statistical software package. Topics of simple linear regression, multiple linear regression, least-squares estimation, hypothesis testing, transformations, generalized and weighted least squares, multicollinearity, variable selection and model building, nonlinear regression models will be included. |
| MATH 3020 | Experimental Design and Analysis | 4 | This course offers a step-by-step guide to the experimental planning process and the ensuing analysis of normally distributed data. We will not only examine the topics of sample size, crossed treatment factors, blocking factors, factorial experiments, nested models, and split-plot design, but also discuss response surface methodology, fractional factorial experiments, random effects and variance components, and computer experiments. |
| MATH 3100 | Applied Linear Algebra | 3 | Applied Linear Algebra is a course that focuses on the practical applications of linear algebra. The course builds upon the foundational concepts of linear algebra and explores their real-world relevance and problem-solving techniques. Students will learn the knowledge related to the topics of vector spaces, linear equations, eigenvalue problems, orthogonality, least squares, symmetric matrices, and quadratic forms, etc. By the end of the course, students are expected to gain the ability to apply linear algebraic methods and tools to analyze and solve problems in real life. |
| MATH 3330 | Multivariate Statistical Methods | 3 | This module deals with the theories and techniques of multivariate statistical analysis and their applications. It covers matrices, random vectors, multivariate normal distribution, estimation and hypothesis testing, regression models, principal components analysis, factor analysis, cluster analysis, discriminant analysis, and other core contents of multivariate statistical analysis. This also includes applications of data sets using statistical software. |
| MATH 3371 | Numerical Methods Analysis | 3 | Numerical methods play a crucial role in solving complex mathematical problems that often arise in engineering, science, and various fields. The course provides students with a comprehensive introduction to the fundamental numerical techniques used to approximate and solve mathematical problems. Topics include interpolation and polynomial approximation, numerical differentiation and integration, numerical methods for differential equations, error analysis, the number of conditions for a linear system, linear and nonlinear systems. By the end of the course, students will develop the skills necessary to apply numerical methods effectively. MATLAB software will be used in this course. |
| MATH 3372 | Introduction to Analysis | 3 | This course is designed to provide students with a rigorous and comprehensive introduction to mathematical analysis. It delves into the basic principles of mathematical analysis, emphasizing the development of a solid theoretical framework to enhance problem-solving skills and promote a deeper appreciation for the subject. Topics include the real number system, limits of functions and sequences, differentiation and more. |
| MATH 3500 | Applied Machine Learning | 3 | This course introduces students to a wide range of machine learning techniques and tools used in data analysis, predictive modeling, and pattern recognition. The course covers a comprehensive range of topics, such as multivariate linear and multiple regressions, k-nearest neighbors, and bootstrap. And it also introduces some typical Statistical Learning methods, including naive Bayes, cross-validation, tree-based methods, and so on. Through a combination of theoretical concepts and practical applications, students will gain a solid foundation in machine learning methods. |
| MATH 3520 | Discrete Mathematics With Applications | 3 | The course is structured to serve as an introduction to the realm of discrete mathematics, aiming to familiarize students with prevalent concepts and methodologies within this field. Its purpose is to acquaint students with fundamental ideas and methods from discrete mathematics that hold broad applicability. Topics included in this course will cover logic and proof, set theory, algorithms, functions, sequences, number theory, cryptography, mathematical induction, counting methods, graph theory applications, combinations, discrete probability, the inclusion/exclusion rule, relations, etc. Students will develop problem-solving skills and mathematical reasoning abilities. |

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| | | | |
|-----------|---|---|--|
| MATH 3550 | Mathematics of Personal Finance | 4 | This course teaches the mathematical and statistical tools used to make smart financial decisions. Students learn how to model saving, borrowing, inflation, taxes, government benefits, insurance, annuities, and investments using algebra, exponential and logarithmic functions, probability, and statistics. Emphasis is on applying these tools to real-life personal finance problems. |
| MATH 3890 | Foundations of Time Series Analysis | 3 | This course is designed to provide students with a comprehensive understanding of time series data and the fundamental techniques and methods used to analyze and model such data. Time series data is prevalent in various fields, including economics, finance, environmental science, engineering, and more. This course will equip students with the knowledge and skills to make informed decisions, predictions, and forecasts based on time-dependent data. |
| MATH 4255 | Advanced Calculus | 3 | This course delves into the advanced techniques and concepts of calculus, with an emphasis on their applications in science and engineering. Students will explore multivariable integral theorems, multivariable functions, the calculus of variations, Green's Theorem, Stokes's and Divergence Theorems. The course bridges rigorous mathematical theory and practical problem-solving, preparing students for research or professional applications requiring advanced analytical skills. |
| MATH 4525 | Survey Sampling | 3 | This course focuses on the principles and techniques of sampling methods for survey research. It provides a thorough introduction to sampling methods, including simple random sampling, systematic sampling, stratified sampling, and cluster sampling. The course also covers advanced topics such as estimation techniques for domain totals/means, ratio estimation, post-stratification, and treatment of missing data. Additionally, students will gain hands-on experience in analyzing survey data using statistical software packages. |
| MATH 4877 | Probability and Statistics | 3 | Understanding uncertainty and making informed decisions requires a solid grasp of probability and statistical methods. This course covers the fundamental principles of probability theory and statistical inference, combining theoretical foundations with practical data analysis. Topics include probability axioms, conditional probability, random variables, probability distributions, the Central Limit Theorem, hypothesis testing, and interval estimation. Emphasis is placed on both the mathematical underpinnings and the interpretation of results in real-world contexts. Students will also gain hands-on experience with the statistical computing environment R, enabling them to analyze data effectively and interpret statistical output. |
| MATH 4900 | Modern Methods for Scientific Computing | 4 | This course provides a comprehensive introduction to numerical methods used to solve mathematical problems arising in science and engineering. Topics include computational linear algebra, numerical solutions of linear and nonlinear equations, interpolation, numerical differentiation and integration, numerical solution of ordinary and partial differential equations, finite element methods, and stochastic simulation methods such as Monte Carlo. Emphasis is placed on algorithm design, analysis of accuracy and stability, conditioning, error estimation, and efficient computer implementation. Students gain hands-on experience with numerical software through assignments and projects. |
| MGMT 1521 | Customer Experience Management | 4 | Central to the hospitality industry is the provision of memorable, high-quality customer experiences across digital and physical touchpoints. This allows hospitality and other service organizations to turn satisfied customers into brand evangelists. This course introduces the emerging domain of customer experience management (CEM)—the discipline of understanding and managing customer interactions with the organization to improve satisfaction, loyalty, and advocacy. CEM is a unique domain that draws on practices from the fields of marketing, marketing research, technology, and data science, and operations and service science, with the aim of understanding and improving customer experiences with the organization. The course will cover the definitions and basic requirements of customer experience management, and also provide detailed frameworks and tools and techniques to allow students to gain proficiency in the language and practice of customer experience design and improvement. |
| MGMT 3300 | Principles of Management | 3 | This course provides an introduction to the fundamental concepts, functions, and practices of management in modern organizations. Students will explore how managers plan, lead, organize, and control operations while navigating ethical challenges, diverse workforces, technological change, and global environments. Emphasis is placed on real-world applications, managerial decision making, effective communication, leadership, teamwork, and organizational adaptability. |

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| | | | |
|-----------|--|---|--|
| MGMT 3750 | Cross-Border Supply Chain Management | 3 | The Cross-Border Supply Chain Management course is designed to equip students with the knowledge and skills necessary to navigate the complexities of international trade and formulate cost-effective strategies for the movement of goods and services across international borders. This course places a strong emphasis on understanding and addressing regulatory and documentation requirements inherent in global supply chain operations. |
| MGMT 4399 | Strategic Leadership and Change Management | 3 | This course delves into the dynamic intersection of business strategy and design thinking, equipping students with innovative methodologies and techniques that transcend conventional approaches to managing businesses. Focused on both current and evolving enterprises, the curriculum emphasizes the integration of creative processes, guiding multidisciplinary teams to realize organizational strategic objectives in brand, product, and service development. |
| MGMT 4420 | Social Entrepreneurship | 3 | This course explores the principles, practices, and challenges of social entrepreneurship. It focuses on the innovative and sustainable solutions that address social and environmental issues. Students will learn how to create, scale, and sustain social ventures, with a strong emphasis on balancing financial goals with social impact. The course blends theory with practice through case studies, real-world applications, and hands-on projects. |
| MUSC 2769 | Jazz Appreciation | 3 | Exploration of jazz as a dynamic musical tradition rooted in African American cultural expression and shaped by social, historical, and artistic developments in the United States and beyond. The course examines stylistic evolution from early jazz to contemporary forms, focusing on the musical characteristics, improvisational practices, and cultural contexts that define each period. Emphasis is placed on active listening, enabling students to recognize key musical elements such as rhythm, form, timbre, and improvisation. Through guided listening, analysis of influential musicians, and discussion of jazz's relationship with other African American musical traditions, students gain a deeper understanding of jazz as both an artistic practice and a cultural voice. |
| PHIL 1100 | Introduction to Philosophy | 3 | This course introduces students to philosophical inquiry, facilitating a thorough examination of essential questions that have influenced human thought across history. By critically analyzing fundamental philosophical themes, students will cultivate a profound comprehension of reality, the boundaries and origins of knowledge, the notion of God, and the quest for meaning in human life. |
| PHIL 1120 | World Religion I | 3 | This course provides a comprehensive introduction to the major religious traditions of Eastern cultures, focusing on their historical development, core beliefs, rituals, texts, and practices. Through a detailed study of Hinduism, Buddhism, Jainism, Sikhism, Confucianism, Daoism, and Shinto, students will explore the philosophical, ethical, and spiritual dimensions of these traditions. Special emphasis is placed on the interplay between religion, culture, and society, as well as the role of Eastern traditions in shaping global perspectives on spirituality and ethics. |
| PHIL 1500 | The Meaning of Life | 4 | What makes life meaningful? Is meaning something we create or something we discover? This course examines enduring human questions about happiness, love, suffering, freedom, and mortality. Through readings in philosophy, literature, and film, students explore classical and modern attempts to make sense of existence. The class emphasizes discussion, reflection, and personal engagement with ideas that shape our sense of purpose and value. |
| PHIL 2305 | Introduction to Logic | 3 | This course provides an introduction to the principles of logic, including symbolic logic, truth tables, and predicate logic. Students will learn how to analyze and evaluate arguments using logical principles and tools. By the end of the course, students should have a solid foundation in the principles of logic and reasoning and be able to apply these principles to everyday life and philosophical discourse. Additionally, they should learn how to translate natural language sentences into symbolic notation, construct truth tables and proofs, and evaluate arguments for validity and soundness. |
| PHIL 2520 | Social Philosophy | 4 | This course explores how society is structured and how power operates within it. We will explore how social structures, institutions, and ideologies shape identity, power, freedom, and justice. Topics include how gender and race affect social standing, how class influences political and economic life, and how major philosophical traditions—liberalism, critical social theory, and postmodernism—analyze, justify, or challenge existing social institutions. |

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| | | | |
|-----------|---|---|---|
| PHIL 2912 | Introduction to Ethics | 3 | A critical exploration of the foundations of morality and moral knowledge, this course examines various philosophical perspectives on ethical theory. Students will engage with key normative ethical frameworks such as hedonism, consequentialism, deontological ethics, virtue ethics, and feminist ethics, while also addressing metaethical questions about the nature of morality. The course delves into the challenges posed by ethical pluralism and moral relativism, offering a comprehensive overview of moral philosophy's role in guiding human behavior. Through thoughtful analysis and discussion, students will assess the philosophical arguments behind these ethical theories and explore their real-world applications. |
| PHYS 1401 | Physics for Life Sciences I | 4 | The primary goal of this course is the presentation of selected principles and topics in physics with applications to the life sciences. Main topics will involve mechanics, work, energy, and power, linear momentum and impulse, angular momentum, rotational motion, heat, and the first law of thermodynamics. Students in this course are required to have basic knowledge of calculus and analytical methods. |
| PHYS 1552 | Physics for Life Sciences II | 4 | Physics for Life Sciences II is a continuation of the introductory Physics for Life Sciences I course, designed specifically for students pursuing studies in the life sciences. This course provides a comprehensive introduction to the principles of electricity and magnetism. It covers the fundamental concepts, laws, and applications of electromagnetism. Students will explore electric fields, magnetic fields, electromagnetic waves, and their interactions with matter. The course includes both theoretical foundations and practical applications, with a focus on developing problem-solving skills. |
| PHYS 2301 | Circuit Theory and Electronics | 4 | Analysis of circuit variables and elements, including resistive networks, operational amplifiers, and transient responses of RL, RC, and RLC circuits. Investigation of linear and nonlinear circuit behavior, element I-V characteristics, AC power computations, and balanced three-phase systems. Application of Laplace and Fourier transforms in circuit analysis to facilitate frequency-domain interpretations. A laboratory component integrates theoretical principles with practical circuit design and experimentation. |
| PHYS 2400 | Principles of Electricity and Magnetism | 4 | This course builds upon the knowledge gained in classical mechanics and calculus courses. It provides an in-depth understanding of electric and magnetic fields, their properties, and their interactions. Topics covered include Coulomb's law, electric potential, Gauss's law, electric circuits, magnetic fields, electromagnetic induction, and Maxwell's equations. |
| PHYS 2537 | Introduction to Electromagnetism | 4 | This course provides students with a solid foundation in the principles and concepts of electromagnetism. The course begins with an exploration of vector analysis, covering orthogonal coordinate systems and the calculus of field quantities. Students will learn about length, surface, and volume integrals, as well as the del operator, gradient of a scalar, divergence theorem, Stoke's theorem, and Laplacian. The course further examines the classification of vector fields and delves into electrostatic fields, including key concepts such as electric potential, capacitance, current, and current density. Additionally, magnetostatic fields, including inductance, will be explored. |
| PHYS 4370 | Quantum Mechanics | 4 | This course offers a rigorous introduction to the foundations and applications of quantum mechanics. Beginning with experimental motivations such as the Stern-Gerlach experiment, students will learn how quantum states are represented mathematically, how they evolve in time, and how measurements affect physical systems. Core topics include quantized energy levels, wave mechanics, angular momentum, and perturbation theory. The course progresses to multi-particle systems, identical particles, symmetries, and modern applications such as quantum tunneling, hyperfine interactions, and periodic potentials relevant to solid-state physics. |
| PSYC 1040 | Foundations of Psychology | 3 | This course provides an overview of the foundational concepts, theories, and methods in psychology. Topics covered include the history of psychology, research methods, biological bases of behavior, nervous system, sensation and perception, language, and thought, learning, memory, motivation, emotion, personality, psychological disorders, and therapy. |
| PSYC 2040 | Introductory Psychology | 3 | This introductory course offers a comprehensive exploration of the fascinating field of psychology, providing students with a foundational understanding of the mind, behavior, and the scientific principles that underlie psychological research. Through a combination of lectures, readings, discussions, and practical exercises, students will embark on a journey to unravel the complexities of human thought and behavior. |

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| | | | |
|-----------|---|---|--|
| PSYC 2095 | Social Psychology | 3 | The course examines how people interact with each other and their social environment. Students will gain an understanding of how social factors shape behavior, thoughts, and emotions, as well as how individuals influence and are influenced by their social context. The course covers a range of topics, including social perception, attitudes, behavior, group process, interpersonal relationships, and language communication. By the end of the course, students should have a strong grasp of the major principles and theories of social psychology and be able to critically evaluate research in the field. |
| PSYC 3252 | Introduction to Cognition | 3 | This course explores the fundamental theories, research, and applications related to cognitive development from infancy through adulthood. Topics include perception, attention, memory, language acquisition, problem-solving, executive function, and the influence of culture and environment on cognitive growth. Emphasis is placed on contemporary research findings and their practical implications for education, parenting, and cognitive enhancement strategies. |
| PSYC 3500 | Drugs and Behavior | 3 | The study of drugs and behavior explores how psychoactive substances influence the brain, body, and behavior. Emphasizing the principles of behavioral pharmacology, this course examines the biological mechanisms, psychological effects, and social implications of drug use. Students will learn how drugs act on the nervous system, how behavior influences drug effects, and how both pharmacological and environmental factors shape patterns of use, dependence, and addiction. The course integrates research from psychology, neuroscience, and pharmacology to provide a comprehensive understanding of how drugs modify human experience and behavior. |
| PSYC 3801 | Family Psychology | 3 | The family is a central influence on human development, behavior, and identity. This course examines the psychological, social, and cultural dimensions of families and intimate relationships in contemporary society. Through theories and empirical research, students explore marriage, partnership, parenting, and family systems across diverse contexts. Topics include changing family structures, communication and conflict, gender and power dynamics, parenting, divorce, resilience, and cross-cultural variations. Emphasis is placed on how psychological processes and social forces interact to shape family functioning and individual well-being. |
| SOCI 1060 | Foundations of Sociology | 3 | Foundations of Sociology is a comprehensive course designed to provide students with a foundational understanding of the key concepts, theories, and methodologies within the field of sociology. The course aims to develop critical thinking skills and sociological imagination to analyze and interpret social phenomena, structures, and processes. By examining various social institutions, social interaction, and social change, students will gain insights into the complexities of human behavior and social relations. |
| STAT 1100 | Introduction to Statistics | 3 | This course is an introduction to statistics, focusing on fundamental concepts and techniques for analyzing and interpreting data. Topics covered include descriptive statistics, probability, probability distributions, statistical inferences, and various statistical analyses. Emphasis will be placed on applying statistical concepts to real-world problems and developing critical thinking skills. |
| STAT 1200 | Introductory Probability and Statistics | 3 | This course serves as a foundational exploration of Probability and Statistics, equipping students with essential tools to understand and analyze uncertainty in various real-world scenarios. The curriculum encompasses key concepts in conditional probability, independence, discrete and continuous random variables, mean and variance, descriptive statistics, and statistical inference. |
| STAT 2114 | Introductory Data Science | 3 | This survey course serves as a comprehensive introduction to the fundamental principles and techniques in the field of data science. Designed for students with diverse backgrounds, the course covers key elements essential to understanding and working with data, including data collection, management, curation, and cleaning. Students will gain proficiency in summarizing and visualizing data, allowing them to derive meaningful insights and communicate findings effectively. |
| STAT 2115 | Analysis of Variance | 3 | This course provides students with a comprehensive understanding of the theory and application of analysis of variance (ANOVA) techniques in statistical analysis. With a specific focus on experimental design principles, it covers topics such as various ANOVA models, including one-way ANOVA, two-way ANOVA, and factorial ANOVA, multiple comparison methods, block design, and more. Students will develop the analytical skills and critical thinking abilities necessary to apply experimental design and ANOVA technique effectively in research and decision-making contexts. |

International Credit Program at Elmira College
 Summer 2026 Course Listing as of 4/23/2026

| | | | |
|-----------|--------------------------------------|---|---|
| STAT 2140 | Applied Statistics Research | 3 | The applied statistics course provides students with the fundamental knowledge and practical skills needed to analyze and interpret data. The course introduces students to the practical application of statistical methods in various fields. Topics include residual analysis, contingency tables, analysis of variance, proportionality inference, goodness of fit, tests for normality, two-sample comparisons, regression and correlation, tests for linearity and outliers. Students will develop the ability to apply statistical techniques to solve problems, make predictions, and derive meaningful insights from data. The course provides a solid foundation for those pursuing further studies in statistics, data science, or related fields. |
| STAT 3200 | Statistical Methods for Data Science | 3 | The course provides an introduction to statistical methods commonly used in the experimental sciences for data analysis and inference. It covers fundamental techniques for analyzing data sets, including parameter estimation and inferential methods, encompassing graphical displays, summary statistics, probability concepts, sampling techniques, distributions, hypothesis testing, confidence intervals, t-tests, correlation, and simple linear regression. Through lectures, practical exercises, and assignments, students will develop a solid understanding of these statistical methods and their applications in scientific research. |
| STAT 3250 | Nonparametric Statistical Methods | 3 | This course systematically introduces basic concepts and practical methods of nonparametric statistics. Topics will include confidence interval, Walsh averages, signed rank test (Wilcoxon), one-sample t-test, two-sample procedures, Medians Equal, Kolmogorov–Smirnov test, Kruskal – Wallis test, Spearman's rank, Chi-Square Test, and ranked set sampling. In this course, students are required to launch a final project and conclude a data report to demonstrate their proficiency in applying appropriate nonparametric methods. |
| STAT 3560 | Statistical Computing | 3 | This course serves as an introduction to statistical computing utilizing the R programming language. The primary focus is on statistical programming, graphical representation, elementary Monte Carlo methods, simulation studies, and basic optimization techniques in R. Students will explore classic methods such as the bootstrap and delve into modern Bayesian inference. By the end of the course, students will have a comprehensive understanding of R and its capabilities, along with a basic proficiency in key computational methods in statistics, including optimization, numerical analysis, Markov Chain Monte Carlo (MCMC) techniques, and simulation methods. |
| STAT 4202 | Mathematical Statistics | 3 | An advanced course designed to provide a rigorous foundation in mathematical statistics. This course will delve into the core concepts and methods used in statistical inference, including point estimation, interval estimation, and hypothesis testing. Students will learn how to develop and evaluate statistical models, estimate parameters, and make inferences about populations based on sample data. The course emphasizes both theoretical foundations and practical applications, preparing students for further study or work in statistics, data science, and related fields. |
